## **INTRODUCTION**

The following developments need to be undertaken:

- A mandatory development in the Common Domain, based upon CCN/CSI and EDIFACT, all these exchanges being part of the core business process;
- A mandatory development of the E\_DEC\_DAT and E\_REL\_TRA exchanges in the External Domain;
- A (strongly) recommended development of a number of messages in the National and External Domains;
- A mandatory development in the Common Domain, based upon XML (or EDIFACT for IE030, IE031, IE032, IE913, IE931, IE932) on the Inter(Extra)net.

The overall development should cover a number of “Business Processes”, as defined for Transit in FTSS 4\_0 NCTS Addendum 2009 [A4]. The following Business Processes have been defined:

- Core Business;
- Guarantee Management;
- Central Services;
- Systems Administration.

In addition, a number of “Technical Messages” need to be foreseen. These are also defined below.

Please note that this Appendix is derived from Appendix A1.

## TECHNICAL MESSAGES

In addition, a number of “technical messages” need to be foreseen. These are summarised below:

IE	Name	Reference	National Export Control Application								
			Send	Receive	Exchange Mechanism				EDI Format		
					Paper	MS	CCN/CSI	Web	EDIFACT	XML	CCN/CSI
IE901	Cancellation Acknowledgement	C_CAN_ACK	M	M			M		M		
IE904	Status Request	C_STD_REQ	M	M			M		M		
IE905	Status Response	C_STD_RSP	M	M			M		M		
IE906	Functional NACK	C_FUN_NCK	M	M			M		M		
IE907	EDIFACT NACK (CONTRL)	C_EDI_NCK	M	M			M		M		
IE908	CCN/CSI Confirm On Delivery (COD) Acknowledgement	C_COD_ACK	M	M			M				M
IE909	CCN/CSI Confirm On Arrival (COA) Acknowledgement	C_COA_ACK	M	M			M				M
IE910	CCN/CSI Expiration notification	C_EXP_NOT	M	M			M				M
IE911	CCN/CSI Exception notification	C_EXC_NOT	M	M			M				M

The IE908, IE909, IE910 and IE911 messages are standard internal CCN/CSI messages that merely need to be used in order to perform message exchanges. Section XI explains in detail how these messages need to be used.

The IE906 and IE907 messages are intended for error and exception handling. The core business process will thus require:

- The implementation of a number of messages in EDIFACT format on the CCN/CSI platform;
- The implementation of a number of messages where the EDIFACT format is required, for the National and External Domains, it is needed to be developed by the NA on a platform.

Note on common technical messages:

- The CCN/CSI technical messages (IE908, IE909, IE910, IE911) are always used for Core Business exchanges. They will also be used for performing exchanges with CS/MIS via CCN/CSI, and also for exchanges with CS/RD (if an NA uses the CCN/CSI platform for exchanges with CS/RD);
- The CCN/CSI messages are transparent to the users. Details concerning the technical CCN/CSI messages are included in DDCOM section VIII;
- The functional NACK and EDIFACT NACK messages (IE906 and IE907) are used to report errors when exchanging Core Business IE;
- They will also be used to report errors when exchanging IEs via CCN/CSI with the CS/MIS application and with the CS/RD application (note that an NA can choose whether or not to use CCN/CSI for performing exchanges with CS/RD). The usage of IE906 and IE907 is further explained in section VIII, chapter 3.

## CENTRAL SERVICES MESSAGES

<b>APPENDIX A3: MESSAGES PER BUSINESS SCOPE</b>	

For the IE030/IE031/IE032/IE913, one of the following developments is mandatory:

- The development of exchanges in XML or EDIFACT format on the Inter(Extra)net;
- The development of exchanges in EDIFACT format on CCN/CSI.

The following is to be noted for Central Services:

- An NA can decide to use CCN/CSI for performing COL and RD exchanges (IE030, IE031, IE032, IE913, IE914, IE916, IE931, IE932), or use the Inter(Extra)net for performing these exchanges.

IE031/IE032 messages are not downloaded via HTTP on the Inter(extra)net but are sent via e-mail (SMTP protocol) to members of mailing list.
