2.1 Definitions

Segment descriptions contain the detailed specification of how each EDIFACT segment is used for each message.

2.2 Components

For each occurrence of a segment, the table given shows the following:

Position	Content
Heading, column 1	The segment tag and its position in the EDIFACT message in brackets. They are in bold. The position number for the UNB segment is 0 as it is the interchange header and part of all messages. The position number is the position within the entire UNSM. The segment tables appear in position number order.
	The position number is followed by the segment name, segment usage (M=mandatory; C=conditional) and the segment occurrence (the maximum number of times it can be used in the transaction).
Heading, column 2	Data group from the FMS that contains the data items carried in the segment. Several data groups can be mapped to the same segment, depending on the segment occurrence (column 1).
Body, column 1	TAG of the composite, component data element and/or simple data element; Name of the composite, component data element (upper case) and/or simple data element (lower case); Usage specified in the UNSM (M=mandatory; C=conditional); Format specified in the UNSM (a=alpha only, n=numeric only, an = alpha-numeric, followed by maximum number of characters allowed. Formats containing '.. (e.g. an..35) signify that the size can be less than or equal to the number of characters shown. Otherwise, size is constant.
Body, column 2	Qualifier value to be used (shown between apostrophes, e.g. '14') qualifier description (in brackets); OR attribute name from FMS, followed by format in brackets
Body, column 3	The 2 Code list applicable.

Table 1: Segment Description Content

The FMS Usage codes included in previous versions of Appendix H have been removed.
