Appendix R: XML Mapping	
1. Introduction	

1. Introduction

This document presents the XML-tags for all the data items and data groups used for NCTS P6. The naming of the XML tags follows specific naming convention that is:

- 3 letters form each word included in the name of the item in a capitalised format,
- following by 3 capital letters common for all the elements within the same group,
- following by an incremental integer number for the items within the same group.

For the data group names only capital letters are used that correspond to the appropriate data group names.

The NAD LNG fields have an XML tag which consists of the XML tag of the data group + the 3 letters LNG.

DDNA RFC-List Alignment

The specific Appendix is aligned to DDNTA RFC-List.40
